No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923), for copying beyond that permitted by Sections 107 and 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1994 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

# CONTENTS OF VOLUME 124

Number 1, January 1994

Expression of Cytochrome P450s and Microsomal Epoxide Hydrolase in Primary Cultures of Human Umbilical Vein Endothelial Cells
Federico M. Farin, Timothy H. Pohlman, and Curtis J. Omiecinski . . . . . 1

Acetylator Genotype-Dependent Formation of 2-Aminofluorene–Hemoglobin Adducts in Rapid and Slow Acetylator Syrian Hamsters Congenic at the *NAT2* Locus
Yi Feng, Timothy D. Rustan, Ronald J. Ferguson, Mark A. Doll, and David W. Hein . . . . . 10

Construction of Syrian Hamster Lines Congenic at the Polymorphic Acetyltransferase Locus (*NAT2*): Acetylator Genotype-Dependent N- and O-Acetylation of Arylamine Carcinogens
David W. Hein, Mark A. Doll, Timothy D. Rustan, Kevin Gray, Ronald J. Ferguson, and Yi Feng 16

Methylene Dianiline Hepatotoxicity Is Not Leukocyte-Dependent
M. B. Bailie, J. A. Hewett, A. E. Schultze, and R. A. Roth . . . . . 25

Early Responses of the Liver of B6C3F1 Mice to the Hepatocarcinogen Oxazepam
Michael L. Cunningham, Robert R. Maronpot, Morrow Thompson, and John R. Bucher . . . . . 31

Reversal of Saxitoxin-Induced Cardiorespiratory Failure by a Burro-Raised $\alpha$-STX Antibody and Oxygen Therapy
Bernard J. Benton, Victor R. Rivera, John F. Hewetson, and Fat-Chun T. Chang . . . . . 39

Chromodacryorrhea in Rats: Absence Following Soman Poisoning
John G. Clement . . . . . 52

Metabolism of 3,3′-Iminodipropionitrile and Deuterium-Substituted Analogs: Potential Mechanisms of Detoxification and Activation
Robert H. Denlinger, Douglas C. Anthony, Kalyani Amarnath, Venkataraman Amarnath, and Doyle G. Graham . . . . . 59

The Cyanide-Metabolizing Enzyme Rhodanese in Different Parts of the Respiratory Systems of Sheep and Dog
Mahmoud Aminlari, Taleb Vaseghi, and Mohammad Ali Kargar . . . . . 67

Activation of Human Monocytes with Lipopolysaccharide Induces Metallothionein Expression and Is Diminished by Zinc
Martha E. I. Leibbrandt and James Koropatnick . . . . . 72

Dose–Response Relationships in Mice Following Subchronic Exposure to 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin: CYP1A1, CYP1A2, Estrogen Receptor, and Protein Tyrosine Phosphorylation
Michael J. DeVito, Xinfang Ma, John G. Babish, Margaret Menache, and Linda S. Birnbaum . . . . 82

Cadmium Toxicity in Rat Pheochromocytoma Cells: Studies on the Mechanism of Uptake
Patricia M. Hinkle and Matthew E. Osborne . . . . . 91

Assay of Pulmonary Microvascular Endothelial Angiotensin-Converting Enzyme *in Vivo:* Comparison of Three Probes
S. E. Orfanos, X-L Chen, J. W. Ryan, A. Y. K. Chung, S. E. Burch, and J. D. Catravas . . . . . 99

Radiation-Induced Early Pulmonary Endothelial Ectoenzyme Dysfunction *in Vivo:* Effect of Indomethacin
S. E. Orfanos, X-L Chen, S. E. Burch, J. W. Ryan, A. Y. K. Chung, and J. D. Catravas . . . . . 112

Role of Quinone Reductase in *in Vivo* Ethanol Metabolism and Toxicity
Jin-Ho Chung, Young Nam Cha, and Robert J. Rubin . . . . . 123

Pharmacokinetic Interaction between Benzene Metabolites, Phenol and Hydroquinone, in B6C3F1 Mice
Agnès Legathe, Betty-ann Hoener, and Thomas N. Tozer . . . . . 131

41 721HI XL 1190
8/94 31249-300

Altered Expression of Cytochrome P450 mRNA during Chemical-Induced Hepatocarcinogenesis and Following Partial Hepatectomy
S. L. Habib, N. S. Srikanth, F. A. Scappaticci, M. B. Faletto, A. Maccubbin, E. Farber, A. K. Ghoshal, and H. L. Gurtoo . . . . . 139

Avian Embryonic Brain Reaggregate Culture System. I. Characterization for Organophosphorus Compound Toxicity Studies
Kathleen A. Funk, Chen-Hsuan Liu, Barry W. Wilson, and Robert J. Higgins . . . . . 149

SHORT COMMUNICATION

Avian Embryonic Brain Reaggregate Culture System. II. NTE Activity Discriminates between Effects of a Single Neuropathic or Nonneuropathic Organophosphorus Compound Exposure
Kathleen A. Funk, Chen-Hsuan Liu, Robert J. Higgins, and Barry W. Wilson . . . . . 159

ANNOUNCEMENTS . . . . . 164

## Number 2, February 1994

Effects of Perfluoro-*n*-octanoic Acid, Perfluoro-*n*-decanoic Acid, and Clofibrate on Hepatic Phosphorus Metabolism in Rats and Guinea Pigs *in Vivo*
Nicholas V. Reo, Carol M. Goecke, Latha Narayanan, and Bruce M. Jarnot . . . . . 165

Developmental Toxicity of 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin (TCDD) in the Most TCDD-Resistant and -Susceptible Rat Strains
Hannele Huuskonen, Mikko Unkila, Raimo Pohjanvirta, and Jouko Tuomisto . . . . . 174

Route-Dependent Comparative Metabolism of [$^{14}$C]Toluene 2,4-Diisocyanate and [$^{14}$C]Toluene 2,4-Diamine in Fischer 344 Rats
C. Timchalk, F. A. Smith, and M. J. Bartels . . . . . 181

Highest Brain Bismuth Levels and Neuropathology Are Adjacent to Fenestrated Blood Vessels in Mouse Brain after Intraperitoneal Dosing of Bismuth Subnitrate
Joseph F. Ross, Richard D. Broadwell, Michael R. Poston, and Gerald T. Lawhorn . . . . . 191

Cardiotoxicity of Heterocyclic Amine Food Mutagens in Cultured Myocytes and in Rats
Cindy D. Davis, Andrew Farb, Snorri S. Thorgeirsson, Renu Virmani, and Elizabeth G. Synderwine 201

Transgenerational, Ultrastructural Analysis on the Antioxidative Effects of Tocopherol on Early Gametogenesis in *Caenorhabditis elegans* Grown in 100% Oxygen
Paul Goldstein and Tomislav Modric . . . . . 212

Speciation of Mercury in the Primate Blood and Brain Following Long-Term Exposure to Methyl Mercury
Marie Vahter, N. Karle Mottet, Lars Friberg, Birger Lind, Danny D. Shen, and Thomas Burbacher 221

Evidence for Embryonic Peroxidase-Catalyzed Bioactivation and Glutathione-Dependent Cytoprotection in Phenytoin Teratogenicity: Modulation by Eicosatetraynoic Acid and Buthionine Sulfoximine in Murine Embryo Culture
Allan F. Miranda, Michael J. Wiley, and Peter G. Wells . . . . . 230

The Thymus Does Not Mediate 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin-Elicited Alterations in Bone Marrow Lymphocyte Stem Cells
Donald E. Frazier, Jr., Allen E. Silverstone, Johann A. Soults, and Thomas A. Gasiewicz . . . . . 242

Effects of 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin (TCDD) on Humoral Immunity and Lymphocyte Subpopulations: Differences between Mice and Rats
R. J. Smialowicz, M. M. Riddle, W. C. Williams, and J. J. Diliberto . . . . . 248

*n*-Hexane-Induced Synthesis of Hepatic Metallothionein Is Mediated by IL-6 in Mouse
Norio Itoh, Hiroshi Okamoto, Mitsue Ohta, Tetsuya Hori, Kyong-Son Min, Satomi Onosaka, Hirokuni Nakanishi, Masaru Okabe, Norio Muto, and Keiichi Tanaka . . . . . 257

Activation of a Calcium- and pH-Dependent Phospholipase $A_2$ by Cyanide in PC12 Cells
C.-W. Yang, A. Rathinavelu, J. L. Borowitz, and G. E. Isom . . . . . 262

The Role of the Intestinal Tract in the Elimination of Carbon Tetrachloride
Donald A. Page and Gary P. Carlson . . . . . 268

The Relationship between Delivered Ozone Dose and Functional Responses in Humans
Timothy R. Gerrity, William F. McDonnell, and Dennis E. House . . . . . 275

Computer Simulation of Cell Growth Governed by Stochastic Processes: Application to Clonal Growth Cancer Models
Rory B. Conolly and Julia S. Kimbell . . . . . 284

Encapsulation of Phosphotriesterase within Murine Erythrocytes
L. Pei, G. Omburo, W. D. McGuinn, I. Petrikovics, K. Dave, F. M. Raushel, J. R. Wild, J. R. DeLoach, and J. L. Way . . . . . 296

Differential Effects of Cyclosporin A on Transport of Bile Acids by Rat Hepatocytes: Relationship to Individual Serum Bile Acid Levels
Samy A. Azer and Neill H. Stacey . . . . . 302

Lead Exposure *in Vivo* Alters the Fertility Potential of Sperm *in Vitro*
Rebecca Z. Sokol, Helen Okuda, Harris M. Nagler, and Nancy Berman . . . . . 310

ERRATUM

Volume 122, Number 2 (1993): "1993 Zeneca Traveling Lectureship Award," p. 326 . . . . . 317

AUTHOR INDEX FOR VOLUME 124 . . . . . 318

SUBJECT INDEX FOR VOLUME 124 . . . . . 319

CHEMICAL INDEX FOR VOLUME 124 . . . . . 323

## INFORMATION FOR AUTHORS

*Toxicology and Applied Pharmacology* publishes original scientific research pertaining to the action of chemicals, drugs, or natural products on the structure or function of animal (including human) cells and/or tissues. Manuscripts should address mechanistic approaches to physiological, biochemical, cellular, or molecular understanding of toxicologic/pathologic lesions and to methods used to describe these responses. Papers dealing with alternatives to the use of experimental animals are encouraged.

When studies involve the use of experimental animals, manuscripts should briefly describe the procedures employed for animal care and handling. Experiments that require the use of animals must be conducted in accordance with the *Guiding Principles in the Use of Animals in Toxicology,* which were adopted by the Society of Toxicology in 1989. A statement of these principles is published in the January issue.

A limited number of short reviews on subjects of timely interest to toxicologists will be considered as part of the section on **Contemporary Issues in Toxicology.** Highlights, Announcements, and Letters to the Editor are discussed below.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

**Manuscript handling fee.** The Society of Toxicology has established that a manuscript handling fee of $100.00, payable to the Society of Toxicology in United States currency, must accompany the original submission of the manuscript. The name(s) of the author(s) and the title of the manuscript must be included in the check identification information. In isolated instances, it is recognized that payment of the manuscript handling fee may pose an extraordinary hardship to the authors. An explanatory letter indicating these circumstances should be sent to the Editor with the manuscript. The editorial decision regarding eventual acceptance or rejection of the manuscript will be independent of the submission of the handling fee.

**Submission of manuscripts.** All manuscripts should be submitted to: ***Toxicology and Applied Pharmacology***

Editorial Office
525 B Street
Suite 1900
San Diego, California 92101-4495
Telephone: (619) 699-6469
Fax: (619) 699-6859

**Form of manuscript.** Manuscripts should be submitted in quadruplicate (one original and three photocopies), in English, including four sets of figures. All copies of halftone photographs and electron micrographs *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Papers in French or German can be considered for publication: authors should contact the Editor prior to submission. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 × 11 in. white paper with 1 in. margins on all sides. Dot matrix printers should not be used.

*Page 1* should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 55 characters including letters and spaces) and the name, telephone number, and complete mailing address of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive: proprietary names must not be used in titles, but may be identified in footnotes.

*Page 2* should contain an abstract starting with the title of the paper, followed by the authors' names and reference to ***Toxicology and Applied Pharmacology***; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words but must contain a concise summary of what was done, the results obtained, and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions, and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

*Example*: A Biologically Based Toxicokinetic Model for Pyrene in Rainbow Trout. LAW, F. C. P., ABEDINI, S., AND KENNEDY, C. J. (1991). *Toxicol. Appl. Pharmacol.* **110,** 390–402.

**Format.** The following text sections should be used.

*Introduction.* State why the investigation was carried out, note any relevant published work, and delineate the objective of the investigation.

*Methods.* New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described: if an accepted code of practice has been followed, a reference to the relevant standards should be given. Details regarding animal housing conditions should be given.

*Results.* Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

*Discussion.* This section must relate to the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

**References.** Names of authors are to be cited in the text with the year of publication in parentheses. When there are more than two authors use the first author's name followed by *et al.* All papers mentioned in the text must be listed in the reference slit and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to *Chemical Abstracts Service Source Index*, 1985. Note the following styles for references.

Cole, R. J., and Cox, R. H. (1981). *Handbook of Toxic Fungal Metabolites*. Academic Press, New York.

Randall, C. (1977). Teratogenic effects of *in utero* ethanol exposure. In *Alcohol and Opiates* (K. Blum, Ed.), pp. 91–107. Academic Press, New York.

Shain, W., Bush, B., and Seegal, R. (1991). Neurotoxicity of polychlorinated biphenyls: Structure-activity relationship of individual congeners. *Toxicol. Appl. Pharmacol.* **111**, 33–42.

**Footnotes** should be identified in the text by superscript Arabic numerals and cited consecutively throughout the paper. All footnotes should be listed in order typed double-spaced on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date, and occasion should be included in a footnote.

**Tables** must be typed double-spaced on a separate sheet with the title typed directly above the table. Do not use abbreviations in the title. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with Arabic numerals. Footnotes to tables should be identified by superscript lowercase *italic* letters and placed at the bottom of the page containing the table. Letters should be assigned to table footnotes alphabetically in order of appearance as the table is read *horizontally,* not vertically.

**Figures** should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. All figures should be planned to fit the proportions of the printed page ($7\frac{1}{8} \times 9$ in.; column width, 3.5 in.); wherever possible, figures will be reduced to single-column width. Lettering on the original figure should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to be legible after reduction of the figure to single-column width (approximately 50 to 60%). *Differences in type size within a single figure should be no more than approximately 15%.* Freehand, penciled, or typewritten lettering is not acceptable. Drawings should be made with the equivalent of black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. *In addition, symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction.* Graphs should be plotted with black India ink on blue coordinate or white paper no larger than 8.5 × 11 in. Grid lines that are to show must be inked in black.

All copies of halftone photographs and electron micrographs *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Photographs must be kept to a minimum. Photographs should be glossy prints (5 × 7 or 8 × 10 in.). Overlays indicating the parts of the electron micrographs that are to be emphasized must be used. Electron micrographs should be submitted not larger than 6.5 × 4.5 in. Magnification should be indicated by a bar on the photograph. Illustrations in color can be accepted only if the authors defray the cost.

Identify all figures on the back, in *pencil,* with authors' names and figure number, and indicate the TOP.

**Index terms** suitable for use in the subject index must be submitted on a separate sheet. The list should include chemical name, generic name, common name, and may include proprietary name of each important substance used in the experiments. It should also include biological activity of each substance investigated. Terms should elucidate important relationships.

**Nomenclature.** For styling of isotope, enzyme, and biochemical nomenclature, consult the extended Instructions to Authors published in each January issue of *Archives of Biochemistry and Biophysics.*

**Abbreviations.** Units will be in general accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Periods are not used after abbreviations (note exceptions, e.g. in. for inches).

Common abbreviations to be used in this journal are:

| | | | |
|---|---|---|---|
| m | meter | ppm | parts per million |
| cm | centimeter | cpm | counts per minute |
| mm | millimeter | dpm | disintegrations per minute |
| μm | micrometer | sc | subcutaneous |
| nm | nanometer | ic | intracutaneous |
| kg | kilogram | im | intramuscular |
| g | gram | ip | intraperitoneal |
| mg | milligram | iv | intravenous |
| μg | microgram | po | oral |
| ng | nanogram | LD50 | medial lethal dose |
| ml | milliliter | LC50 | medial lethal concentration |
| μl | microliter | Hz | hertz |
| mol | mole | °C | centigrade |
| M | molar | sec | seconds |
| mM | millimolar | min | minutes |
| μM | micromolar | hr | hours |
| N | normal | SD | standard deviation |
| Ci | Curie | SE | standard error |
| $\bar{x}$ | mean | TLV | threshold limit value |

**Reprints.** A reprint order form will accompany the proofs. Fifty reprints of each article (without covers) are supplied free of charge.

**Personal computer disks.** Manuscripts may be submitted to *Toxicology and Applied Pharmacology* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names

must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

Highlights. *Toxicology and Applied Pharmacology* will accept a limited number of **highly significant, complete (not a preliminary report), and timely** reports that have progressed to the stage at which the science of Toxicology would be advanced were the results made available as soon as possible. These reports will be designated "Highlights." The Highlights should be limited to no more than 2 tables and/or 2 figures and should include no more than 12 double-spaced, typewritten manuscript pages. The articles published as Highlights will have a facilitated publication time. The manuscript must be submitted in quadruplicate and conform strictly to the form and style of the journal.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to Editorial Board approval, provided that the content deals with papers published in *Toxicology and Applied Pharmacology* and that the comments are of scientific value. Letters should be received within two months of mailing of the journal and should be no longer than 250 words. Introduction of new data will not be permitted. Each letter will be submitted to the author of the original paper in order that any reply may be published simultaneously with the letter.

Announcements: *Toxicology and Applied Pharmacology* will accept for publication announcements of interest to toxicologists such as notices of society meetings, symposia, or other matters.

---

*Sterling Winthrop Pharmaceuticals Research Division is the worldwide pharmaceutical research and development organization of Sterling Winthrop Inc. Our Collegeville, PA facility seeks a*

## SENIOR RESEARCH INVESTIGATOR
## Lab Animal Resources

This senior level scientist will lead the drug safety pharmacology program including its integration for research projects, selection of studies and assays, interpretation of results, report documentation, and assurance of appropriate conduct of all aspects of this program. Additionally, this scientist will lead the animal models program providing leadership in the development and application of suitable in vivo and in vitro models in comparative medicine for ongoing research projects. This position serves as the focal person for worldwide application of both programs.

Requirements include a Ph.D. in pharmacology or a related biological discipline. An individual with a dual degree of Ph.D. and veterinarian medicine (DVM/VMD) is preferred. Board certification is advantageous. Candidate should have 2 or more years experience in a biomedical research environment and have experience in scientific presentations and publications.

At Sterling Winthrop, you'll enjoy a highly competitive salary and a comprehensive and flexible benefits package. For confidential consideration, forward your resume and salary requirements to:
